Theoretical Computer Science
Logic, semantics and theory of programming

Volume 212, Numbers 1–2, 6 February 1999

Gentzen

Guest Editors: C. Böhm
I. Guessarian

Abstracted/Indexed in: ACM Computing Reviews, Compuscience, Computer Abstracts, Current Contents: Engineering, Technology & Applied Science, Engineering Index/Compendex, INSPEC Information Services, Mathematical Reviews, Zentralblatt für Mathematik

Contents

Foreword

C. Böhm and I. Guessarian 1

Contributions

M. Benke
Some complexity bounds for subtype inequalities 3

A. Berarducci and M. Dezani-Ciancaglini
Infinite λ-calculus and types 29

H. Boley
Functional-logic integration via minimal reciprocal extensions 77

V. Bono and M. Bugliesi
Matching for the lambda calculus of objects 101

R. Dyckhoff and L. Pinto
Permutability of proofs in intuitionistic sequent calculi 141

M. Emms and H. Leiß
Extending the type checker of Standard ML by polymorphic recursion 157

F. Honsell and M. Lenisa
Semantical analysis of perpetual strategies in λ-calculus 183

B. Intrigila and M. Venturini Zilli
Orders, reduction graphs and spectra 211

A. Piperno
An algebraic view of the Böhm-out technique 233

H. Schwichtenberg
Termination of permutative conversions in intuitionistic Gentzen calculi 247

D. Spreen
On functions preserving levels of approximation:
A refined model construction for various lambda calculi 261
